PROFESSIONAL SUMMARY

Technical delivery and integration professional with 3+ years of progressive experience across PMO/Business Analysis, DevOps/Delivery, Technical Integration, and Operations within the TIME BSS Project. Experienced in translating business requirements into technical solutions across API and system integration, Change Request delivery, UAT, production migration, and system maintenance. Strong understanding of system behaviour and end-to-end delivery, with experience coordinating clients and cross-functional teams to drive requirements through implementation and production.

WORK EXPERIENCE

Whale Cloud Technology – Shah Alam, Selangor
Career Progression: PMO/BA → DevOps/Delivery → Technical Integration → Operations Manager

Operations Manager – TIME Project Novo April 2026 – Present

- **Coordinate** a 6-person team responsible for ongoing maintenance and Change Request (CR) delivery across 9 TIME BSS modules, including COC, ARC, CSC, JNL, UOSFLOW, CC, CRM, CPC, and CIC.
- **Manage** 20–30+ CRs ranging from minor enhancements to major system changes, covering requirement gathering, impact assessment, planning, execution, testing, and client acceptance, while acting as the primary client-facing contact for clarifications, delivery updates, and issue resolution.
- **Maintain** hands-on involvement in technical and delivery activities while overseeing team execution, assessing system behaviour, technical constraints, and CR impacts across modules, while also coordinating annual system audits conducted by the client's external vendor, PwC.
- **Drive** knowledge transfer and team capability development by onboarding and training new joiners, documenting operational processes, and progressively transitioning execution responsibilities to strengthen team capacity and delivery continuity.

Technical Integration Lead (Delivery + O&M) – TIME Project Novo June 2025 – April 2026

- **Led** integration of ZSmart APIs across 7 TIME front-end channels, provisioning systems, and third-party vendors, while integrating external services including OCR, CTOS, and Order Manager into ZSmart to enable end-to-end service workflows.
- **Coordinated** UAT preparation and execution with clients and internal teams, delegated responsibilities, managed issue escalation with Solution Consultants and R&D, and ensured test cases were resolved prior to full GO-LIVE.
- **Acted** as the primary technical point of contact during integration, clarifying business requirements, resolving API discrepancies, providing workarounds, and aligning client expectations with implemented system behaviour.

DevOps / Delivery Engineer – TIME Project Novo October 2024 – June 2025

- **Documented** API endpoints and edge-case scenarios using Postman and Apidog collections, creating structured request examples and usage references to accelerate integration testing and developer troubleshooting.
- **Developed** automation scripts using internal APIs to generate bulk SIT and UAT test data, reducing manual preparation effort and accelerating validation for staff, 5K customer, and full data migrations.
- **Executed** migration operations for staff and 5K live customer accounts, validating API integrations, SFTP workflows, and third-party connectivity while participating in DR–PR environment swing activities to maintain operational readiness.

Project Management Office (PMO) | Business Analyst – TIME Project Novo March 2024 – October 2024

- **Facilitated** requirement discussions with TIME dotCom stakeholders, documented meeting outcomes, and supported Solution Consultants with structured documentation for System Requirement Specification (SRS) development.
- **Established** standardized documentation templates and SharePoint folder structures, improving requirement traceability, file organization, and long-term project knowledge management.
- **Reviewed** internal system module SRS and Change Request documentation, improving clarity and requirement interpretation while contributing to successful requirement sign-off across modules.

SELECTED PROJECTS

ConX Agency (Campaign Connector) December 2024 – Present

- **Developed and deployed** an active internal platform used by the business team to systematically document and manage influencer details as new product features are continuously rolled out.
- **Collaborate** with founders to gather requirements, define feature scope and user flows, and drive AI-assisted implementation using Next.js and Tailwind CSS.
- **Conduct** functional testing, manage code changes through Git/GitHub, and refine edge cases to ensure seamless deployment for internal operations.

TECHNICAL SKILLS

Languages: Java, Python, JavaScript
Frontend: Next.js, Angular, Tailwind CSS
Database: MySQL
System & Infrastructure: Kubernetes, Containerized Services, API Gateway, SFTP
Integration & Delivery: API Integration, Requirements Gathering, SIT, UAT, Change Request Management, Data Migration, System Maintenance
Tools: Git, GitHub, Postman, Apidog, SharePoint
Spoken Languages: English, Malay, Chinese

EDUCATION

Asia Pacific University (APU) – Kuala Lumpur, Malaysia November 2021 – March 2024
BSc (Hons) in Computer Science with Specialism in Artificial Intelligence | (**CGPA - 3.73 / 4.00**)
First Class Honours | Vice Chancellor List | APU Malaysian Scholarship & Merit Award Holder

Asia Pacific University (APU) – Kuala Lumpur, Malaysia January 2019 – September 2021
Diploma in ICT with Specialism in Software Engineering | (**CGPA - 3.90 / 4.00**)
First Class Honours | APU Malaysian Scholarship & Merit Award Holder
